

AI Face recognition & Body Temperature Detection Terminal

The face recognition temperature tester uses binocular living face recognition technology and infrared thermal imaging technology, combined with intelligent AI software, to achieve accurate face recognition and temperature prevention and control purposes.

- 8" Display Face recognition: Binocular living recognition.
- Body temperature measurement: automatic measurement of the forehead.
- Mask recognition; remind users to wear masks correctly.
- Temperature measurement range 30-45 (°C) Accuracy ± 0.3 (°C)
- Unique face recognition algorithm to accurately recognize faces, face recognition time <500ms
- Support access control or external connection
- Support stand-alone, network mode.
- Support data upload or stand-alone copy.
- Background software function :
 - A) Personnel management;
 - B) Attendance management;
 - C) Epidemic prevention and control statistical reports;
 - D) Access records management;

Pro Model
